SELFBLUE MASTER

The payment system for vending

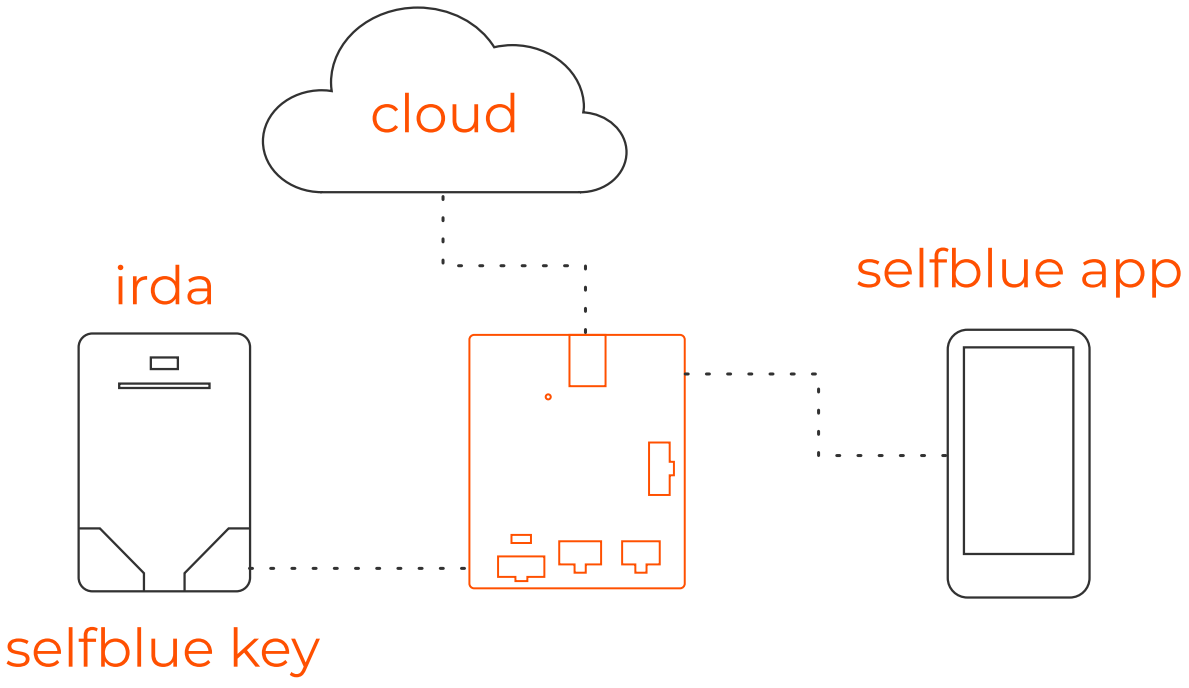
www.peachwire.com

The integrated system for managing payments

SELFBLUE Master is an Executive/MDB payment system that integrates the SELFBLUE electronic wallet (payment via app), a key reader, telemetry, and data collection.
The MDB port can be connected to a change giver, a banknote validator, and a credit card reader. It also features a parallel port for pulse coin validators
The system is highly configurable: the SELFBLUE electronic wallet, key reader, and telemetry are optional, allowing it to adapt to the needs of each vending place.
In Price Holding mode, the system manages 100 prices with three different price lists (one for cash, one for cashless 1, and one for cashless 2). In this mode, activating telemetry allows prices to be updated remotely.

Other features of SELFBLUE Master:

- Configurable via Bluetooth with the SELFBLUE CONFIG app
- Standard and extended audit, via IrDA or Bluetooth
- Firmware update with USB stick
- Configurable keys via the SELFBLUE CONFIG app with discounts, free credit and bonuses
- Up to 3 cashless systems simultaneously
- Ability to transfer credit from one cashless system to another (for example, top up keys with a credit card)
- Access to the SELFBLUE portal features.



Reduces costs and simplifies vending management

Cost management in vending is becoming increasingly crucial, especially due to the increase in raw material costs.
SELFBLUE Master is an integrated payment system with (optional) telemetry at a reasonable cost that helps make management profitable.
This is why we have chosen high-performance yet affordable technologies, favoring, where possible, standard technologies over proprietary ones. This is the case with vending keys based on NFC technology.

We offer 3 types of keys:

1. "Type 1" key with the classic card format
2. "Type 2" resin-coated key of smaller dimensions
3. "Type 3" custom model designed by us.

The keys are printed with a progressive number that uniquely identifies them and is reported in the extended audit.
